

Dashboard Developer Guide

Weighted completion 83.9% | target >= 70% | best-effort Looker parity

1. What this guide is

Deterministic conversion of Power BI report pages into Looker LookML dashboards. Use PAGE_COMPARISON.md side-by-side with each .dashboard.lookml file. Pixel-perfect recreation is not claimed; functional analytics tiles are the goal.

2. Power BI -> Looker visual map

Card/KPI -> single_value. Bar/column -> looker_bar/column. Line/area -> looker_line/area. Pie/donut -> looker_pie. Table/matrix -> looker_grid. Slicer -> dashboard filters + listen. Text -> text tile. Shapes/images/buttons skipped or marked as gaps.

3. Pages in this PBIX

- Project Overview => dashboards/project_overview.dashboard.lookml (1 visuals)
- Executive Summary => dashboards/executive_summary.dashboard.lookml (23 visuals)
- Hospital Insights => dashboards/hospital_insights.dashboard.lookml (18 visuals)
- Patient Analysis => dashboards/patient_analysis.dashboard.lookml (22 visuals)
- Payer-Provider Analysis => dashboards/payer_provider_analysis.dashboard.lookml (17 visuals)
- Monthly Expenses Trends => dashboards/monthly_expenses_trends.dashboard.lookml (2 visuals)

4. Deploy steps

- Unzip LOOKML_DASHBOARDS.zip into the LookML project that already has Phase 2 model/views.
- Confirm model: and explore: names match Phase 2 output.
- Push to Looker (dev mode). Open each dashboard and resolve any missing fields.
- Wire filters: slicers become dashboard filters; tiles already listen where mapped.
- Use comparison/PAGE_COMPARISON.md as the acceptance checklist per page.

5. Coverage and deficiencies

Weighted completion is 83.9% against a 70% target. Gaps include bookmarks, drillthrough, custom visuals, themes, exact layout, and partial support for combo/treemap/map. Gap tiles remain on the dashboard so deficiencies are visible.

Mapped: 48 | Partial: 22 | Gaps: 5

6. How to finish remaining work

- Add missing dimensions/measures in Phase 2 views, then re-run Phase 3 field bind.
- Replace gap text tiles with Looker native viz or marketplace visualizations.
- Recreate navigation with Looker links / board folders instead of PBI bookmarks.
- Apply Looker themes for brand; do not expect identical PBI theme JSON.

7. Hard rules

Never invent visuals not present in PBIX Layout.
Field refs must come from Phase 1/2 inventory naming.
Report coverage honestly - do not claim 100% pixel parity.
No LLM in Phase 3 extract/map/emit path.
