

Migration Validation Report

Overall 81.9 pct done | 18.1 pct left | confidence HIGH

2026-09-16 12:20:37 UTC

1. Accuracy statement

Percentages are computed from inventory JSON / OBJECT_MAPPING / COVERAGE only. They measure migration generation coverage - NOT live Looker KPI parity or warehouse deploy success. Confidence reflects evidence completeness, not business acceptance.

Formula: $0.15 \cdot P1 + 0.45 \cdot P2 + 0.40 \cdot P3$ (renormalized if a phase is missing)

Weights used: {'phase1': 0.15, 'phase2': 0.45, 'phase3': 0.4}

2. Conversion scorecard

Phase 1: Extract / inventory

Done 100.0 pct | Left 0.0 pct | Confidence HIGH

File presence + OBJECT_COUNTS evidence; extract is deterministic (pbixray).

Source PBIX: Human Resources Sample PBIX.pbix

Phase 2: Semantic model / LookML

Done 83.0 pct | Left 17.0 pct | Confidence HIGH

Weighted from phase2/OBJECT_MAPPING.json statuses (mapped=1.0, partial=0.5, todo=0). Placeholder connection/dataset still require user input.

Source PBIX: Human Resources Sample PBIX.pbix

Open items listed: 8 (see JSON/MD for full list)

- measure | measure:emp_count
- measure | measure:actives
- measure | measure:new_hires_sply
- measure | measure:actives_sply
- measure | measure:seps_sply
- measure | measure:emp_count_sply
- measure | measure:bad_hires_sply
- measure | measure:to_pct_norm

Phase 3: Dashboards / visuals

Done 73.8 pct | Left 26.2 pct | Confidence HIGH

Weighted visual coverage from phase3/inventory/COVERAGE.json (decorative skips excluded; mapped/partial/gap weights fixed).

Source PBIX: Human Resources Sample PBIX.pbix

Open items listed: 18 (see JSON/MD for full list)

- partial | VisualContainer8

3. Where you must edit LookML (user input)

Scanner found 84 markers in 35 files. Severity counts: {'HIGH': 48, 'MEDIUM': 30, 'LOW': 6}

Go to each file/line below in your IDE. HIGH = must fix before Looker validate. MEDIUM = KPI/parity or gap tiles. LOW = polish.

HIGH priority (29)

- phase2/lookml/m_migration/M_QUERY_RECOMMENDATIONS.md:50 - Replace BigQuery project.dataset in sql_table_name
CREATE OR REPLACE VIEW `YOUR\_PROJECT.YOUR\_DATASET.bu` AS

```

MEDIUM priority (6)

- phase2/lookml/MEASURE_DEPENDENCIES.md:14 - Measure stubbed as complex_todo - implement SQL + KPI parity

```
| `new_hires_sply` | New Hires | complex_todo | TODO |
```

- phase2/lookml/models/human_resources_sample_pbix.model.lkml:4 - Resolve TODO - complex DAX / parity / missing logic

```
# TODO: set connection to your Looker Admin connection name
```

- phase2/lookml/models/human_resources_sample_pbix.model.lkml:23 - Explore/view notes KPI parity still required

```
description: "Migrated from Power BI (Human Resources Sample PBIX.pbix). KPI parity not yet validated."
```

- phase2/lookml/views/employee.view.lkml:136 - Measure stubbed as complex_todo - implement SQL + KPI parity

```
description: "From Power BI measure `EmpCount`. Strategy=complex_todo. Complex / filter / time-intel DAX -  
implement with LookML period patt
```

- phase2/lookml/views/employee.view.lkml:138 - Resolve TODO - complex DAX / parity / missing logic

```
# TODO: complex DAX - keep original expression; validate KPI parity before production
```

- phase3/lookml_dashboards/dashboards/bad_hires.dashboard.lookml:53 - Dashboard tile deficiency - verify field or replace gap tile

```
# deficiency: PBI aggregation on Employee.BadHires mapped to field ref; confirm a measure exists on employee (Phase  
2) or add type -su
```

LOW priority (6)

- phase2/lookml/models/human_resources_sample_pbix.model.lkml:23 - Optional: rewrite explore/dashboard description for end users

```
description: "Migrated from Power BI (Human Resources Sample PBIX.pbix). KPI parity not yet validated."
```

- phase3/lookml_dashboards/dashboards/actives_and_separations.dashboard.lookml:4 - Confirm dashboards-next is enabled in your Looker instance

```
preferred_viewer: dashboards-next
```

- phase3/lookml_dashboards/dashboards/bad_hires.dashboard.lookml:4 - Confirm dashboards-next is enabled in your Looker instance

```

```
preferred_viewer: dashboards-next
```

- phase3/lookml_dashboards/dashboards/new_hires.dashboard.lookml:4 - Confirm dashboards-next is enabled in your Looker instance

```
preferred_viewer: dashboards-next
```

- phase3/lookml_dashboards/dashboards/new_hires_scorecard.dashboard.lookml:4 - Confirm dashboards-next is enabled in your Looker instance

```
preferred_viewer: dashboards-next
```

4. Recommended checklist order

- 1. Fix HIGH items first: connection + YOUR_PROJECT.YOUR_DATASET in every view/model.
- 2. Implement Phase 2 TODO measures (complex DAX) and re-validate KPIs vs Power BI.
- 3. Open Phase 3 dashboards; replace gap/partial tiles listed in remaining work.
- 4. Re-run validation/run_validation.py after edits to refresh this report.

5. What this report does NOT claim

It does not prove warehouse tables exist, Looker connection works, or numbers match Power BI. Those require deploy + KPI parity tests after you replace placeholders and finish TODOs.
