

Deterministic LookML Mapping Architecture | Phase 2

No LLM in mapping. Fixed Python rules + looker-skills. Inventory in -> LookML ZIP + developer guide out.

INPUT

ROLE: Phase 1 inventory

- 01..05 JSON + OBJECT_COUNTS
- No PBIX re-extract in Phase 2

ORCHESTRATOR

ROLE: Deterministic control

- Run stages 1-5 then Packager 6
- Never invent objects / no LLM

1 INGEST

ROLE: Load

- Read inventory
- Detect fact
- Skip internals

2 EQUIVALENCE

ROLE: Map

- PBI->Looker rules
- OBJECT_MAPPING
- Gap flags

3 VIEWS

ROLE: Dims

- view per table
- primary_key
- date groups

4 MODEL/JOINS

ROLE: Explore

- model file
- joins+rel
- aliases

5 MEASURES

ROLE: DAX

- sum/avg/count
- ratios
- TODO complex

6 PACKAGER

ROLE: Guide + ZIP + summary

- LOOKER_DEVELOPER_GUIDE.pdf + LOOKML_PROJECT.zip + GAPS.json + PHASE2_SUMMARY.json
- UI downloads: LookML ZIP and developer guide PDF

AFTER PHASE 2 (developer / warehouse - not automated)

ROLE: Make LookML production-ready

- Set connection + sql_table_name; rebuild Power Query in warehouse; materialize calc columns.
- Implement complex DAX TODOs; close HIGH gaps; validate LookML; side-by-side KPI checks vs Power BI.

What each mapping stage does

1 Ingest

Load Phase 1 inventory JSON; detect fact table; exclude LocalDateTable_* / DataTableTemplate_*.

2 Equivalence

Apply fixed PBI->Looker object rules; write OBJECT_MAPPING; start HIGH/MEDIUM/LOW gap list.

3 Views

Emit one .view.lkml per business table with primary_key, dimensions, dimension_groups.

4 Model/Joins

Emit model + explore; map relationships to joins with explicit relationship::; alias inactive/M:M.

5 Measures

Classify DAX deterministically (sum/avg/count/ratio vs TODO); preserve original DAX in descriptions.

6 Packager

Build developer guide PDF, LOOKML_PROJECT.zip, GAPS.json, PHASE2_SUMMARY.json for UI download.

Standards: Looker docs + [looker-open-source/looker-skills](#)

lookml-view (PK), lookml-explore (relationship), modeling-guidelines (granular includes). Phase 2 does not create dashboards (Phase 3) and does not invent warehouse tables.
