

Extract Validation Proof - Phase 1

Verdict: PASS (15 passed / 0 failed)

Deterministic extract (no LLM). Proof method: re-open PBIX with pbixray and compare live object counts/names/expressions to each stage inventory file. Also cross-check stages.

Checks

- 1. [PASS] A1 tables == live pbix.tables
inventory=36 live=36 missing_in_inv=[] extra_in_inv=[]
- 2. [PASS] A1 columns present
columns=231
- 3. [PASS] A2 relationships == live count
inventory=16 live=16
- 4. [PASS] A2 relationships reference known tables
all from/to tables exist in schema extract
- 5. [PASS] A3 measures == live dax_measures
inventory=5 live=5
- 6. [PASS] A3 calc columns == live dax_columns
inventory=121 live=121
- 7. [PASS] A3 calc tables == live dax_tables
inventory=20 live=20
- 8. [PASS] A3 measure expressions match (sample)
checked=5 matched=5
- 9. [PASS] A4 power query == live count
inventory=16 live=16
- 10. [PASS] A4 m_raw files == queries
m_files=['actor', 'address', 'category', 'city', 'country', 'customer', 'film', 'film_actor', 'film_category', 'film_text', 'inventory', ...
- 11. [PASS] A4 m files non-empty
bytes=['actor:463', 'address:569', 'category:416', 'city:436', 'country:417', 'customer:580', 'film:713', 'film_actor:419', 'film_categor...
- 12. [PASS] A5 RLS captured as list
rls_count=0
- 13. [PASS] A5 auto date tables captured
auto_date=20
- 14. [PASS] Cross: calc table names align A1/A3
calculated_tables name sets equal
- 15. [PASS] Merger counts file present
OBJECT_COUNTS.json + OBJECT_INVENTORY.md

Measure sample matches

[OK] Revenue: SUM(payment[amount])
[OK] Total Films Rented: COUNTROWS('inventory')
[OK] Average Inventory Value: AVERAGE('film'[rental_rate])
[OK] Inventory Turnover Rate: [Total Films Rented] / [Average Inventory Value]
[OK] FilmPopularity: SUMX('film',COUNT(film[rental_rate])
)
